

Ansar A

MERN Stack Developer

Alappuzha — ansarpanoor311@gmail.com — +91 6235179274 — LeetCode — LinkedIn — GitHub — Portfolio

Profile Summary

MERN Stack Developer skilled in full stack development, backend development, and API development using MongoDB, Express.js, React, and Node.js. Experienced in building scalable web applications, designing RESTful APIs, implementing authentication and authorization systems, and delivering client-focused freelance solutions. Built real-time applications handling 50+ users with features like real-time seat booking, live streaming, notifications, and custom CMS solutions.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, C
- **Frontend Development:** React.js, HTML, Tailwind CSS, Bootstrap
- **Backend Development:** Node.js, Express.js, REST API Development
- **Architecture:** MVC Architecture, Repository Pattern, Clean Architecture
- **Databases:** MongoDB, PostgreSQL (Database Design, Query Optimization)
- **Tools:** Git, GitHub, Postman, Figma, Docker
- **Concepts:** Data Structures and Algorithms, Authentication & Authorization, API Design
- **Cloud/Deployment:** AWS, Vercel, Render, Cloudinary

Projects

HealthHive – Online Doctor Consultancy

[Live-Link](#)

Developed a full-stack telemedicine platform enabling doctor-patient video consultations and appointment scheduling.

- **Authentication & Authorization:** Implemented JWT-based authentication supporting 3 user roles
- **Real-Time Communication:** Enabled chat and video consultation for 50+ concurrent users
- **API Development:** Developed and implemented 15+ RESTful APIs
- **Payment Integration:** Integrated Razorpay for secure transaction handling
- **Cloud Storage:** Managed 100+ medical reports/images using Cloudinary

Occasio – Event Ticket Booking Platform

[GitHub](#)

Engineered and developed a scalable full-stack event ticket booking platform supporting both online and offline events with real-time seat management.

- **Seat Management System:** Architected block-based seat layout handling 200+ seats per event with real-time seat locking
- **Full Stack Development:** Built 20+ APIs and responsive UI for booking and event management
- **Real-Time Systems:** Enabled real-time updates for 100+ users using Socket.IO
- **Live Streaming:** Integrated WebRTC supporting 50+ concurrent users
- **QR Code System:** Generated QR-based tickets for secure event entry
- **Authentication & RBAC:** Implemented role-based access for 3 user roles
- **Database Design:** Structured MongoDB schema for events, bookings, and seats

- **Payment Flow:** Implemented Stripe-style mock payment system

Freelance Projects

BEXDXB – Business Platform

[Live-Link](#)

Developed and delivered a production-ready business platform for BEXDXB with scalable backend architecture and custom admin content management solutions.

- **Full Stack Development:** Built and maintained application using React.js, Node.js, Express.js, and MongoDB
- **Architecture:** Structured backend using MVC Architecture for maintainability and scalability
- **Custom CMS:** Developed admin-side CMS for dynamic website content management
- **Media Management:** Integrated Cloudinary for optimized image and video uploads
- **Admin Features:** Built modules for photo uploads, review management, and video publishing
- **API Development:** Designed RESTful APIs for content creation, updates, and retrieval

Education

MERN Stack Development Program

(Aug 2023)

Brototype, Kerala

B.Tech Computer Science

(2020 – 2023)

UCE Thodupuzha

Diploma in Computer Science

(2017 – 2020)

GPTC Kaduthuruthy
